

Dhiman Dasgupta

Software Developer in Test (SDET)

Playwright | TypeScript | API Automation | CI/CD | AI-Assisted Testing (Kiro, Claude)

dasguptadhiman5@gmail.com | [+91-8823831336](tel:+91-8823831336) | linkedin.com/in/dhiman-dasgupta | github.com/Dhiman07-create

PROFESSIONAL SUMMARY

SDET who turns 65-hour manual release cycles into 3-hour automated ones. 3+ years building automation frameworks from zero — not maintaining someone else's — using AI-assisted development (Kiro, Claude, GitHub Copilot) to accelerate the work. At Cognizant: owned test strategy and stakeholder sign-off, led a client-facing QA team of 4, cut regression effort 34+ hours/release, and lifted coverage 30 points. At Tecsyst: rebuilt release validation from scratch in under 3 months. If your team still measures QA in days, that's the gap I close.

PROFESSIONAL EXPERIENCE

Tecsyst Inc. – Software Developer in Test

Jun 2026 – Present

- Built a Playwright TypeScript automation framework from zero for the Warehouse Management System, cutting release-validation time from 65 hours to 3 hours per cycle (95% reduction) by architecting reusable fixtures, API clients, and reporting modules, integrated with Azure DevOps and GitLab CI/CD pipelines.
- Prevented 8 defects from reaching production during PostgreSQL migration by designing automated regression suites that validated data integrity across 20 core tables and workflows.
- Standardized coding guidelines and Playwright best practices now adopted by 3 product teams, establishing a shared automation foundation for future release cycles.
- Authored and ported automation tests from TypeScript to Python to integrate with Swift, Tecsyst's proprietary test platform, using Kiro and Claude to scaffold test code before reviewing and refining it for production, enabling tests to be reused as components for UI and flow-level testing.

Cognizant Technology Solutions – Software Development Engineer in Test (SDET)

Sep 2023 – May 2026

- Cut regression execution time by 34+ hours per release cycle by rearchitecting the test suite for parallel execution across Playwright, Selenium, and Appium.
- Raised automation coverage from 40% to 70% by identifying real-world edge cases using usage analytics and AI-assisted development (GitHub Copilot), prioritizing the highest-risk business workflows first.
- Held production defects near zero across 25 releases by building GitHub Actions CI/CD pipelines with automated quality gates that blocked merges on failed test runs.
- Owned test strategy and planning for major feature releases, driving test-case sign-off with cross-functional stakeholders and executing manual/exploratory testing alongside automated regression suites within an Agile/Scrum STLC process.
- Led a client-facing QA team of 4 engineers, mentoring junior QAs while owning end-to-end quality engineering across AI-powered web, mobile, and API platforms.

SELECTED ENGINEERING PROJECTS

Playwright UI + API Automation Framework – github.com/Dhiman07-create/playwright-e2e-framework

- Cross-browser Playwright TypeScript framework (Chromium, Firefox, WebKit) with parallel execution and Allure reporting.

Flipkart End-to-End Automation Framework – github.com/Dhiman07-create/flipkart-regression

- Automated 25+ customer journeys (login through checkout) using a scalable Page Object Model architecture with CI/CD-ready execution.

E-Commerce API + UI Automation Framework – github.com/Dhiman07-create/ecommerce-api-automation

- Automated 50+ API validation scenarios covering CRUD operations, schema validation, authentication, and business workflows.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, SQL

Automation: Playwright, Playwright TypeScript, Selenium WebDriver, Selenide, Appium, REST Assured, Postman, Playwright API Testing

Mobile: Android Automation, iOS Automation, TestMu AI | **CI/CD:** GitHub Actions, GitLab CI/CD, Azure DevOps, Git, Maven |

Reporting: Allure Reports | **Databases:** PostgreSQL | **AI-Assisted Dev:** Kiro, Claude, GitHub Copilot

Methodologies: Agile/Scrum, Software Testing Life Cycle (STLC), Regression Testing, Smoke/Sanity Testing, Exploratory Testing, Shift-Left Testing, Quality Engineering, Test Automation Architecture, Cross-Browser & Cross-Platform Testing, Team Leadership & Mentoring

ACHIEVEMENTS

- Cut release-validation time from 65 hours to 3 hours per cycle (95% reduction) at Tecsyst.
- Increased automation coverage from 40% to 70% at Cognizant.
- Held production defects near zero across 25 releases at Cognizant.

EDUCATION & CERTIFICATIONS

B.Tech – Electronics & Telecommunication, Bhilai Institute of Technology — CPI: 9.03

Certifications: Selenium, API & Mobile Automation Testing; Selenium Practitioner – Cognizant
